

## Protecting Equipment That Protects Us

Finishing Technologies credits our reputation for quality and professionalism to our knowledgeable staff. We provide creative solutions for your specialty coating application needs. We offer the latest equipment from electrostatic and powder coating equipment to ratio-assurance technology, as well as high-pressure airless painting gear and small-batch dispensing equipment. We also engineer and supply complete turnkey finishing systems, like paint booths and ovens, parts handling and transfer devices, including conveyors, overhead power and free systems, hoists and monorails.

We specialize in equipment geared to apply the latest protective coatings, like plural-component epoxies and urethanes. We also feature coating systems that are proven for the application of both traditional and water-reducible CARCs that meet the most recent standards for VOC reduction. Chemical Agent Resistant Coating paint is designed for use on military-grade vehicles, munitions, and equipment. CARC has the unique ability to resist corrosion and the penetration of chemical agents and is required on all combat equipment.

### Cost-Saving, Pro-Environment Finishing Tools

Specialized coatings require specific systems and technologies to apply, as well as complete turnkey finishing systems. Using high transfer efficient equipment to meet stringent environmental standards also saves on the bottom line: as much as 20-35% on your coating use. Let us help your finishing department save money in several ways:

- Reduce material costs with less overspray with more efficient spray methods
- Booth-filters reduce labor and disposal costs due to longer filter life
- Reduce labor costs the fewer times you need to clean and maintain your exhaust stack
- Fewer production shut-downs occur when less system maintenance is needed
- We installed a primer-tested electrostatic system that reduced chromate exposure by 90% and dramatically reduced their re-work and paint usage
- Prevent expensive re-work with your plural-components using electronic mix-ratio equipment with ratio-assurance
- Efficient application of specialty coatings using the latest equipment for the application of protective coatings, titanium duct, CIC, fuel cell containment and sealants/adhesives
